"Transitioning towards a Circular Economy for PET - Where does the industry stand and how are supply chains transforming?"

"Changing global PET economics as Asia's upstream expansions generate more competitive supply to EU market"

Asian expansion of PX will be a major driver of change and will affect the European market.

As Chinese exports become more competitive, will we see a big wave of supplies hitting the market? and how will this change global PET economics?

The PET industry supply chain is rapidly transforming as every stake holder adapts to fulfill its role and responsibility as a sustainable producer.

Brandowners & beverage producers are supporting the increase in use of recycled materials, demanding integrated solutions from preform manufacturing to PET recycling.

Recent breakthroughs in preform production from flakes to bottle are blurring the boundaries between converters and recyclers, as now even recyclers can become preform producers.

How will converters cope in this tough competition and low margins?

Virgin resin manufacturers are increasingly investing in recycling operations & technologies globally to meet the demand of brandowners.

DAK's recent announcement of purchasing Perpetual recycling comes shortly after Indorama announced its purchase of plastics recycling company Custom Polymers PET.

Is increasing the recycling percentage in PET bottles the key to sustainable development ?

CMT celebrates its 20th GEPET & Recycling conference this year in Madrid with crucial updates on PET market developments, breakthroughs in PET recycling technologies, 100% rPET innovations and many more.
