China was until recently the largest importer of PVC. But with domestic production increasing over the last 10 years, volumes of **imports declined** while **export values increased**. The country is evolving into a **net exporter as investment in capacity outstrips growth** in domestic demand.

China's **exports really hit the international arena** last year, which pushes exporters of PVC to other parts of the world, and impact chlorine market balances in every region. It's clear that within a fairly short time, China will not only be selling finished goods around the world, there will also be a substantial outflow of resin.

However, **heavy investment in new PVC capacity** continues in China. China leads the world in both production and consumption of PVC, and demand will rise 8% annually through 2010. Construction will remain the largest application due to **the country's construction boom**. At our **CMT 7th Asia Chlor-Vinyls Conference**, you will meet with professionals to learn the country's **highly active construction sector** and meet with **end-users from plastic pipe, window profiles and wire & cable** to learn about their demand and requirements for PVC.

China has overtaken the United States as **the world's largest chlor-alkali supplier**, and will increasingly be dominant over the next five years as new capacity starts up. **Production and consumption of salt in China is also increasing**. PVC is currently the primary driver for salt demand growth in China. The growth of downstream industries will also affect chlor-alkali, supply-demand balances in China. **CMT's 7th Asia Chlor-Vinyls Conference** will update you with the **latest market trends on feedstocks** of PVC.

China's rapidly increasing capacity for both **acetylene-based** and **ethylene-based** PVC started exerting downward pressure on PVC prices during the later half of 2005. This conference will discuss the **cost structure / economics comparison of carbide vs ethylene based PVC production**.

China may be getting the most attention, but there are plenty of expansion projects going on in other parts of the world. The supply-demand dynamics in **South East Asia, Middle East & western countries** are quite different. For example, **Pakistan became a net importer of PVC** this year due to a 20% surge in domestic demand, mainly from the construction sector; yet in **America**, the result of **US mid-term congressional election may change the US energy policy and output decisions**. **CMT's 7th Asia Chlor-Vinyls Conference** brings together key industry players from different regions to address the latest emerging issues.

At this conference, you will listen to Chinese and regional PVC producers share their **expansion plans and strategies**; evaluate the **feedstock situation**; meet **PVC peers from around the world** and hear from **end-users in the different sectors**. Other key highlights of the conference include:

- Global Vinyl industry outlook
- Chlorine & Caustic outlook & challenges in Asia/China
- Potential of plastic recycling
- Latest innovations in plastic additives
