"Seajacks awarded Japanese offshore wind contract"

~ 11 Jan 2021, Splash247

"Toshiba to produce 'state of the art' wind turbine"

~ 11 Nov 2020, Windpower

Following the first floating wind farm auction off Goto City announced in June 2020, Japan further ink its commitment in offshore wind growth by launching the first tender at four areas off the country's coast last December. The tender covers Noshiro City, Mitane Town and Oga City, and Yurihonjo City off the coast of Akita Prefecture and Choshi City off Chiba Prefecture.

Japan aims to expand its offshore wind power installed capacity to 10 GW by 2030 and 30 to 45 GW by 2040.

Developments are in the pipeline as interested parties get ready with bids. Domestic Japanese and foreign are partnering to form stronger competence outfits for this accelerated demand for renewable energy.

Join us in the focused discussion on **Offshore Wind Japan** as our expert speakers take you through the development in the tender process and updates, as well as key pointers on contractual management in the Japan's offshore wind.

During the presentations, participants are welcomed to post their comments and questions, for group discussion and deliberation.
