

Decarbonising the transport sector by 2050 will require a paradigm shift to overcome the significant hurdles that remain in the pathway to transition. As transport industries look to slash greenhouse gas emissions and examine alternative fuel options, biofuels are well-placed to meet short-term international emissions goals. Despite some increase in cost, their global consumer base is seemingly more willing today to cover this increase for the benefit of the environment.

Biofuels & Transport Decarbonization virtual event will focus on transport industries' decarbonisation journey from key drivers, challenges to future plans. We will also provide latest updates on biofuel policies, supply and demand, trends to watch and technological innovations.
