"According to Bloomberg NEF, global electric car sales are estimated to have reached 5.6 million vehicles in 2021 from 3.1 million in 2020, thanks to brisk sales in China. Further demand growth in 2022 will mean a lithium deficit this year as use of the material outstrips production and depletes stockpiles, according to a December report from S&P Global." ~ Nikkei Asia, 3 Jan 2022

As the global economy emerges from the COVID-19 disruption, production and supply of battery materials and components is expected to pace up to meet the rising demand for electric vehicles and etc. Meanwhile joint ventures and investments in these green metals have been announced.

This conference will cover the global markets from various geographies and perspectives on the supply of battery metals, forecasted demand of EV, investment mitigation options as well as the emergence of battery recycling in the supply chain.
